Retalix Self-Checkout

STORE & SALES CHANNEL SUITE

KEY BENEFITS

Speeds up time-to-market

Allows retailers to make self-checkout hardware choices independent of software

Eliminates need for middleware

Provides flexibility required to configure customized options

Complements other store touch-points

Creates a more personalized self-checkout shopping experience

Lowers costs

Self-Checkout isn't a new concept. Neither are the limitations that come with it.

Ever since retailers have turned to self-checkout to help lower labor costs, provide convenience, and enhance their customer's shopping experience, they've been forced to install inflexible solutions driven by hardware decisions. The potential benefits of the system as a whole are often compromised, and so is the customer's experience. Shoppers are forced to forego a personalized solution because they're limited to what traditional self-checkout systems have to offer.

That's why you should check into Retalix Self-Checkout (RSCO). Just as we've done for years with traditional front-end POS solutions, Retalix is now helping you raise the bar and lower the cost of providing a best-in-class self-checkout solution. Part of Retalix 10, the industry's leading retail software suite, Retalix Self-Checkout allows you to separate hardware decisions from your software choice, giving you the flexibility—and cost savings— needed to tailor the self-checkout experience to best meet your individual store environments.

CUSTOMER SCALE

ATM integration for automated cash

Compatibility with lane Tri Light

Cashless self-checkout option

Unified point of contact for software enhancements and support

Available with Retalix 10 and Retalix StoreLine

CHECK OUT THE FUTURE. CHECK INTO HIGHER PROFITS.

RSCO is the self-checkout software retailers have been looking for. A fully integrated solution, RSCO eliminates the need for middleware in a self-checkout environment. Extensions to the Retalix POS application work directly with the self-checkout hardware, allowing new features and functions to get to market sooner and at a lower cost. And hardware independence not only helps lower deployment and maintenance costs, it also gives retailers the flexibility to choose customized self-checkout options, including:

- A comprehensive solution with scale security
- Cashless self-checkout
- Alternative hardware options utilizing traditional front-end equipment
- Support for a wide variety of peripherals, including tower lights, cash recirculators, and more.

Able to operate on multiple platforms, RSCO brings consistency to users who rely on diverse hardware types across the chain. As a single point of contact for upgrades and enhancements, it also eliminates the need for multiple software vendors and unnecessary redundant costs when making changes.

Developed to complement the same application, data, item graphics and users of the traditional POS system, RSCO allows retailers to use the same GUI concepts and designs found in other touch-points throughout the store. It also brings a level of personalization that has simply never existed with self-checkout before.

For the first time, retailers can evaluate self-checkout software and hardware independently on their own merits. For large, multi-store chains and smaller mid-sized operations alike, Retalix Self-Checkout is the single-best choice for you.
